# Jaylen and Aiden's Space Adventure

Read the short story and answer the questions

Jaylen and Aiden were best friends. They loved to look at the stars and wonder about what was out there. They often dreamed of becoming astronauts and exploring outer space.

One day, while looking at the stars, Jaylen and Aiden decided to make a plan. They would study hard in school, learn everything they could about science and math, and train to become astronauts.

As they grew older, Jaylen and Aiden continued to pursue their dream. They joined the astronomy club at their school and learned about planets, stars, and galaxies. They also took part in science experiments and built model rockets. When they graduated from high school, Jaylen and Aiden applied to astronaut training programs. After a rigorous selection process, they were both accepted. For years, Jaylen and Aiden trained to become astronauts. They learned how to operate spacecraft, perform spacewalks, and survive in extreme conditions.

They also studied the planets and stars of the solar system.

Finally, the day came when Jaylen and Aiden were assigned to their first space mission. They were part of a team that would travel to Mars.

The journey to Mars was long and challenging. But Jaylen and Aiden were determined. They worked together as a team and overcame every obstacle. When they finally reached Mars, Jaylen and Aiden were amazed by its beauty. They explored the planet's surface and collected samples of rocks and soil. They also studied the Martian atmosphere and searched for signs of life.

After their mission, Jaylen and Aiden returned to Earth as heroes. They had achieved their dream of becoming astronauts and exploring outer space. They were proud of their accomplishments and inspired others to follow their dreams.
